Product introduction

Potato drum washing is the first step in achieving a perfect end product. Tinwing is continuously developing new, sustainable technologies for this purpose. The set-up of your washing process will depend on the pollution of your potatoes and the type of product you are intending to turn them into.

Equipment details

Advantage

- 1. Unique and trusted:** You might think the water cleans the potato. But it's the friction according to a process developed by Tinwing, which provides removal of unwanted waste. The water ensures the removal of the dirt. The machines are designed to clean the potato so it follows its way undamaged.
- 2. Solid and reliable:** Our solid approach leads to answering your question for a reliable machine. The rotating drum of the pre-washer is made of wear-resistant steel. Even the hardest clay layers are removed. A central shaft drives the drum. The after washer is made of stainless steel, laser or water jet cut, so the internal surface causes no damage to the product.
- 3. Practical and cost effective:** The Tinwing washers are compact and easy to clean. The machines can be equipped with a water recirculation system, which offers 90% savings on the already low water usage. The retention time of the product and the quantity of water used, is variable according to customer requirements. The machine is available with a capacity of 4.5 to 70 tons per hour.
