Portable Space Capsule House

Standardized movable fully prefabricated space capsule

- Independent research and development, with quality guaranteed.
- Regardless of the terrain, return to nature.
- Panoramic view, rapid installation.
- Overall pre- fabrication

Product advantages

01

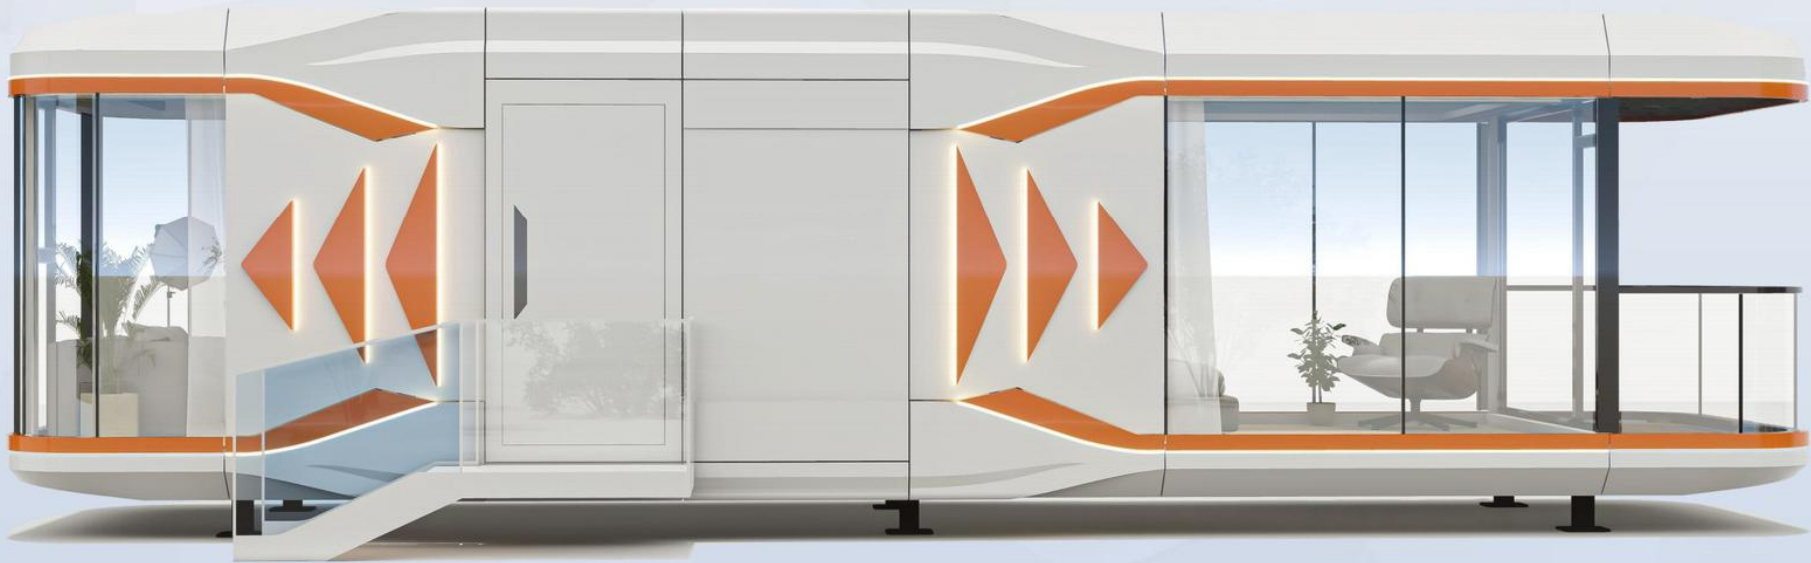

Modular pre - fabrication

02

The foundation is simple, not restricted by terrain, and it can penetrate deep into the hinterland of the scenic area

03

It is eco - friendly, can be assembled and disassembled as a whole without damaging plants.

04

Ultra - low energy consumption, environmental - friendly sewage discharge, and zero pollution to the environment.

05

It is movable and can be hoisted on - site, which is convenient and fast, allowing you to move in with just a suitcase (ready - to - live - in).

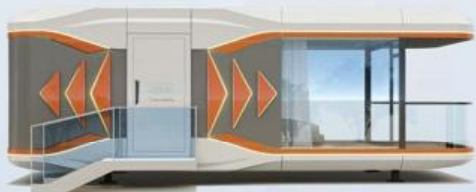

06

Metal framework, aluminum panel, integral bathroom, and hollow Low - E tempered glass.

07

Seismic - resistant, wind - resistant, cold - resistant, heat - insulating, moisture - proof, anti - corrosion, fire - proof, and water - proof.

Area: 16.2M²

O3

L:8.8M* W:3.0M* H:3.2M

Area: 24.0M²

Advantage

1. Do not change the nature of land use, do not damage the ecological environment, and produce no construction waste and scraps.

2. Simple foundation, which can be moved at any time. Level it according to the geological conditions on - site. It only needs simple four - point support of concrete or steel structure. It is not restricted by terrain. It can be assembled and disassembled as a whole and can be moved at any time.

3. It is applicable to a very wide range of terrains, such as high mountains, steep ridges, valleys, deserts, dense forests, lakes, glaciers and other severe terrains. It can make more use of scattered land plots where surrounding conventional buildings are not suitable for construction.

4. The whole - set production takes 30 - 60 days, and it can be installed and put into use within 2 hours after arriving at the site, which shortens the construction period and improves the operation efficiency of putting into production. It can be directly connected to the municipal water, electricity and sewage systems. In remote uninhabited areas, it can be equipped with photovoltaic solar power generation systems, water storage, water purification systems and vacuum fecal suction devices. In frigid regions, it can be configured with heat preservation and heating systems.

5. Modular pre - fabrication and integrated production. The stainless - steel metal framework and the aluminum veneer shell are used, and both the interior and exterior decorative boards are pre - fabricated and fastened in a modular way. There is a pre - fabricated integral bathroom. There is a 100 - mm - thick polyurethane insulation layer and 6 + 12A + 6 double - layer hollow Low - e tempered glass. All the materials used have national quality inspection certificates and enterprise structural safety certifications.

6. Overall delivery, move - in with luggage. The factory delivery includes: the overall structure, interior and exterior decoration and the whole - house intelligent control system, air conditioner, water heater, hardware, bathroom facilities, lighting, audio, hard decoration, fresh air system and furniture.
