

## Why choose ZD backpack UAV/Signal Jammer?

### Details saying professional and best quality

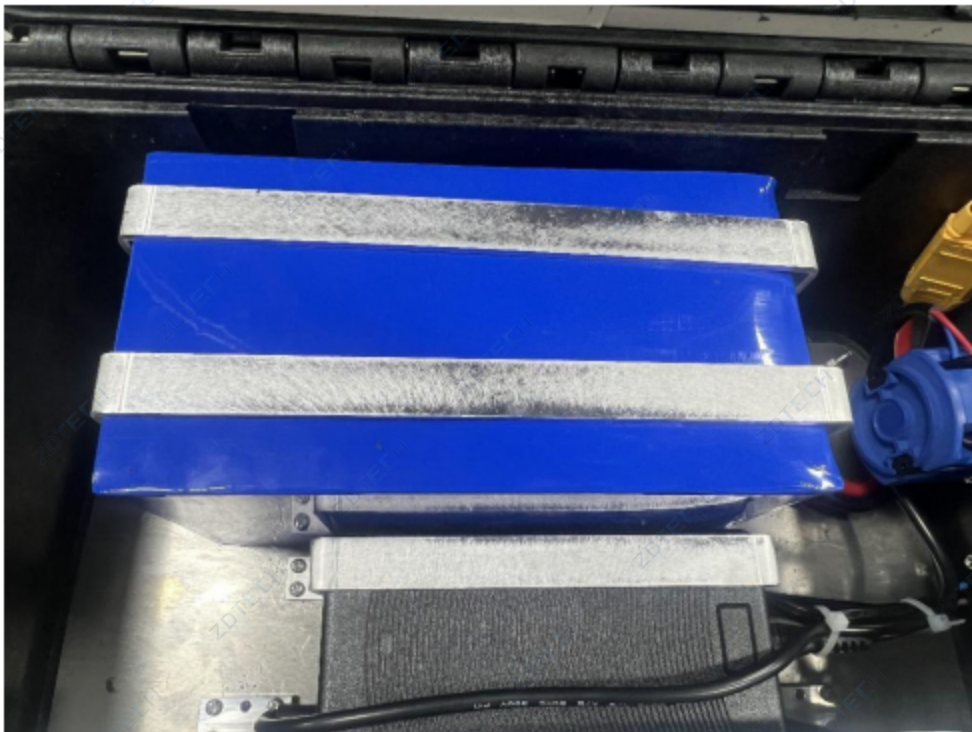

1. Temperature control system, ZD exclusive design, for general backpacks , the fan will start after powered on, but with this temperature control technical system, it will start the fan function smartly at about 50 degree, prolong the lifespan of the fan by flexible use.

2. Heat dissipation profile, ZD's aluminium heat dissipation profile is taller, thicker and bigger than others, and there is a big pad at the bottom, which can bring better heat dissipation effects than normal types.

3. Battery, we use Model 21700 battery, the highest density of high-capacity batteries produced by a listed company Chuangming. In the case of full frequency bands on, the system can work up to 1.5 hours in the actual test, other normal ones can only work for 30 minutes- this is one of our major cost highlights, almost 3 times of normal battery, the battery export certificate of use and documents can be checked.

#### 4. One button start function

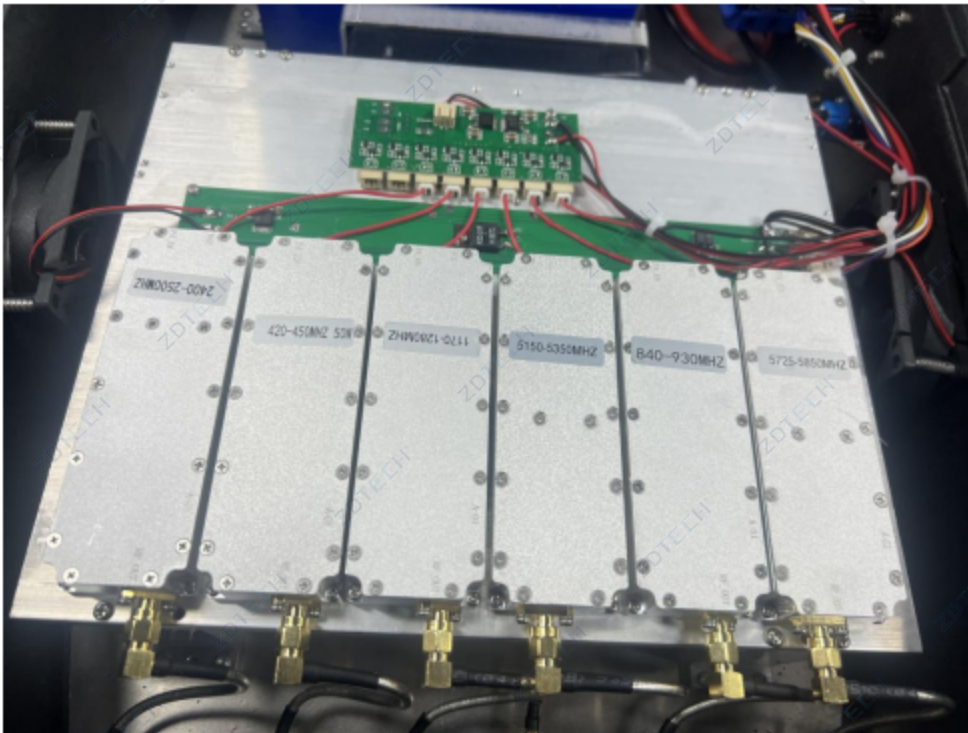

Our unique design - one button start function, other companies almost do not have this technology. This function helps us to use the one button control on the device to turn on the system when the handle button is broken or lost. This is one of the highlights of our backpack.

#### 5. Our batteries are removable, which can prevent inconvenient transport or user replacement of batteries

6. Each of our modules is made of GaN, 50watt or more, customer can test in actual.

7. High temperature resistant, 50ohm semi-flexible cables, low loss, low insertion loss, connectors can be up to 6G.
