

Three-Phase Calibration Terminal Data Sheet

Tespro China's Three-Phase Calibration Terminal TA-272-3P is designed for three phase electronic energy meter error calibration. TA-272-3P can measure energy meter errors, display of voltage, current, power, power factor, frequency etc. What is more, TA-272-3P can measure the following parameters:

- * Harmonics of 2nd to 51st
- * Show the voltage, and current waveform of three phase A.B.C
- * Measurement of transformation ratio for CT
- * Communication examination for energy meters
- * Register measurement
- * Detection of wiring failures and calculation of electricity compensation
- * USB and communication ports available

TA-272-3P has a wide application in the fields of State Grid, Power Grid, local power, and utility companies.
