

Diamond Film/Paper

Abrasive diamond film/paper is the use of international advanced ultra-precision coating technology, will be micron or nano diamond powder and new polymer materials evenly dispersed, coated on the surface of high strength film, and then processed by high-precision cutting process.

Specification

| Mesh | #600 | #2000 | #3000 | #4000 | #8000 | #10000 |
|---------------|---|-------|-------|-------|-------|--------|
| Particle size | 30 | 9 | 6 | 3 | 1 | 0.5 |
| Circular | Φ70mm, Φ110mm, Φ127mm(5 inch), Φ203mm(8 inch) | | | | | |
| Square | 114mm×114mm, 152mm×152mm(6 inch), 228mm×228mm(9 inch) | | | | | |

Features:

- ◆ Good strength and toughness, long working life.
- ◆ Good adhesion and abrasive resistance, uniform abrasive coating excellent grinding and polishing result.
- ◆ Water or oil can be used as grinding media to grind and polish, also can be dry grinding & polishing directly.

Applications:

- ◆ Widely used in the field of optical communication, optical glass, magnetic head, automobile, metallurgical analysis and etc.
